Light the way

A recent survey has shown that as many as 8 out of every 10 members join a gym to lose weight, 60% place an emphasis on toning and sculpting their body and 100% admit to being de-motivated when they don't see results quickly! *Beauty Salon News* takes a look at an alternative to invasive procedures.

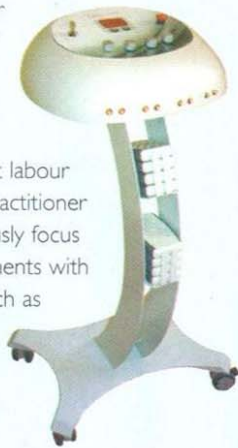

LIPO-LIGHT is a body shaping and fat expelling system that delivers weight loss and body contouring results for clients.

Developed in the UK by the founders of N-Light and IPL and laser specialists, Innovate Photonics, **LIPO-LIGHT** is a body shaping and fat expelling system that delivers weight loss and body contouring results for clients.

LIPO-LIGHT is the first red light based system for body sculpting, contouring and lymphatic drainage, harnessing the power of Light Therapy to trigger the body's own natural ability to burn fat and visibly reduce inches around the body. It enables the fat cells to release fatty acids and glycerol which are then burned off during exercise, enabling faster results in the gym. LED Light Therapy causes fat cell membranes to lose their round shape by changing the permeability of the cell which then triggers the release of an enzyme which breaks down these fat cells to pass through the pores of the cell wall and into

the bloodstream. The Light Therapy also stimulates the body's lymphatic system which helps the released fat drain away more efficiently resulting in inch loss where the treatment is focused.

It's simple to use, hygienic and effective. All eight pads remain in direct contact with the skin for the duration of the 20 minute treatment, and because the treatment is not labour intensive, the practitioner can simultaneously focus on other treatments with other clients such as manicures and pedicures.
